Part 1

In Part 1, you determine your own payoff by throwing two dice as soon as you are asked to. If you do not have physical dice, you can type "roll a six-sided die" into google to roll dice digitally.

Your two dice throws decide how much you receive based on their sum. You can see the exact payoff from the following chart.

Sum of two dice thrown:	**7**	**6 or 8**	**5 or 9**	**4 or 10**	**3 or 11**	**2 or 12**
Resulting payoff:	$0.50	$1.00	$1.50	$2.00	$2.50	$3.00

You may of course throw both the dice more than once to make sure that the dice are working properly. However, only the first throw of each die counts.

Please throw the first and second die now (or if you only have one die, please throw it twice) and enter the sum of the two die throws.

First die number thrown:	
Second die number thrown:	
Sum of both dice:	
Resulting payoff:
